(54) **Title:** SYSTEM THAT DETERMINES, DISPLAYS AND CONTROLS THE LEVEL OF ANY COMMODITY STORED IN A STORAGE TANK.

(57) **Abstract:** The invention is a system that determines displays and controls the level of any commodity stored in a storage tank. The first module is a non-contact ultrasonic sensor module which will be fixed at the top of the tank. This module will determine the amount of the commodity in the tank. It will then wirelessly send the value it has determined to the second module. The second module is the display and control module. It will be located at a location which is most convenient to the user e.g. office, kitchen etc. This module receives the amount of the commodity in the tank from the sensor module and displays the value on an LCD display. It will further serve to automatically control any pumping action required at tank levels specified by the user.
